K.R. Komarek Inc Continues Expansion of Best-Selling B-Series Roll Briquetters and Compactors

April 10, 2018—Wood Dale, IL— Building on years of designing and manufacturing custom roll briquetter and compactor machines, K.R. Komarek Inc is continuing expansion of its best-selling B-series machines to help customers with their process application needs. In addition to the B220, machines include the B400B, along with the newer B400CH and BH400CH machines.

Thomas Barnett, vice president, operations at Komarek, says the rugged and versatile B-series machines are popular because of the cantilevered roll design. “Our unique cantilevered roll design allows for easy and rapid roll changes, helping our customers save money on maintenance costs by keeping their material processing operations running dependably,” says Barnett. The B-series machines also feature variable speed roll and either screw feed or gravity feed drives to maximize product quality. The newer B400CH and BH400CH also feature wider horizontal rolls. To-date, Komarek has sold over 100 B-series machines worldwide.

For more information about Komarek’s full line of custom roll briquetting and compaction/granulation systems, join Komarek at the International Powder & Bulk Solids Conference & Exhibition, April 24-26, 2018 at the Donald E. Stephens Convention Center in Rosemont, IL. Komarek will be exhibiting at booth #2714.

About K.R. Komarek, Inc

The Komarek name has been associated with the design and manufacturing of briquetting and compaction/granulation machines for over a century. With over 600 machine installations worldwide for industries including chemical, mineral, micronutrients, agricultural, and energy, Komarek has the experience and specialized knowledge to offer the best solution for your specific process application. For more information, visit www.komarek.com.
