FOR IMMEDIATE RELEASE

SPEC ENGINEERING INTRODUCES VIRTUAL REALITY CAPABILITIES
VIRTUAL REALITY IS A NEW WAY TO VISUALIZE YOUR PROJECT

Plainfield, IL., January 28, 2018 – SPEC Engineering is a process engineering and systems provider in the food and specialty chemical industry. SPEC takes pride in providing customizable and full-service solutions to a wide variety of customers. Starting in 2018, SPEC will offer customers a new and innovative way to view their concepts through virtual reality.

At the Powder & Bulk Solids Show, taking place April 24-26, 2018 at the Donald E. Stephens Convention Center, attendees will be the first to experience how this technology can take concept to completion. Using a virtual reality headset, participants will experience firsthand SPEC's past plant design and equipment through this cutting-edge technology.

Whether customers are interested in fitting one piece of equipment into their existing plant or designing a whole modular skid system, the virtual reality technology will enhance the offerings by SPEC. This software allows customers to visualize layout and equipment components along and identify any potential issues before fabrication or install is started. Furthermore, SPEC will use virtual reality to determine the best ergonomic design for operators.

By integrating virtual reality as an option into SPEC's Front End Design (FED) or system packages, customers will be able to sign off on a design review with more confidence, particularly in situations where a Factory Acceptance Test (FAT) is not feasible. Customers can also utilize this technology as a training method prior to installation and completion of the project for quicker start-up time.

To learn more about SPEC, please visit SPEC's website at www.spec.engineering. Contact SPEC at info@specengsys.com, or call 815-676-5006.

###

ABOUT SPEC ENGINEERING

Located in Plainfield, Illinois, USA, SPEC Engineering is a full-service process engineering firm, providing the latest in technology. SPEC provides custom process skid systems, upgrades and expands line components, and offers complete plant design and implementation. Since 1979, SPEC has been serving the bulk material processing and handling needs of customers in the food and specialty chemical industries by offering complete turn-key solutions. SPEC offers turn-key complete solutions; starting with the engineering department, all systems are first designed with 3D drawings, then the assembly department fully assembles system in-house first for FAT testing, lastly the implementation department provides installation and start-up support services on-site at our customer's location.
